About Toronto

WCNH-2020

Toronto is Canada's largest city and a world leader in such areas as business, economical, automation, dissipation and civilization. Its large populace of settlers from all over the map has also made Toronto one of the best multicultural cities in the planet.

Toronto, the most multicultural varied city on the planet: over 140 terminologies are spoken. It's estimated that over half of Toronto's tenants were born outside Canada, and despite its complex makeup, Torontonians generally get along. When the climate is fine, Toronto is a blast: a dynamic, big-time city abuzz with enterprise. Some of the world's finest cafeterias are found here, alongside happening bars and clubs and wide-ranging feasts.

The melting of ice from the past glacial age altered the Toronto region's landscape profoundly. Approximately 11,000 years ago a body of water much larger (about 130 feet [40 metres] higher) than the present-day Lake Ontario was in existence there—a glacial lake referred to as Lake Iroquois. With the opening up of the St. Lawrence River, the lake waters fallback, dropping in excess of 300 feet below the present level.

Climate
Toronto has a global climate that is revised considerably by the proximity of the Great Lakes. Average temperature for January is in the low to mid-20s F (about $-4.2\text{ }^{\circ}\text{C}$), but the wind chill factor can decrease this temperature considerably. In summer, the average July temperature is in the low 70s F (about $22.2\text{ }^{\circ}\text{C}$); however, it is not unusual to have summer days where the temperature exceeds $90\text{ }^{\circ}\text{F}$ ($32\text{ }^{\circ}\text{C}$) and the humidity is 100 percent.
